

# Glitch Tool

This tool allows you to easily achieve glitch effects on your 3D game objects. This game effect is particularly suitable for showing mechanical failures or signal interference. It allows you to easily adjust the color of glitch and the speed of movement. It also supports all rendering pipelines. I hope this tool can help you well.

## Features:

1. Very easy to use
2. Contains multiple adjustable parameters
3. Support URP, HDRP, Built-in render pipeline
4. Support Windows, Android, IOS
5. Good support

Before importing this tool, you need to import another unity Asset

<https://assetstore.unity.com/packages/3d/3d-game-kit-character-pack-135217>

In order to better show you this effect, I used "Cinemachine"

when making the demo. Please import "Cinemachine" in the Package Manager before importing this package.

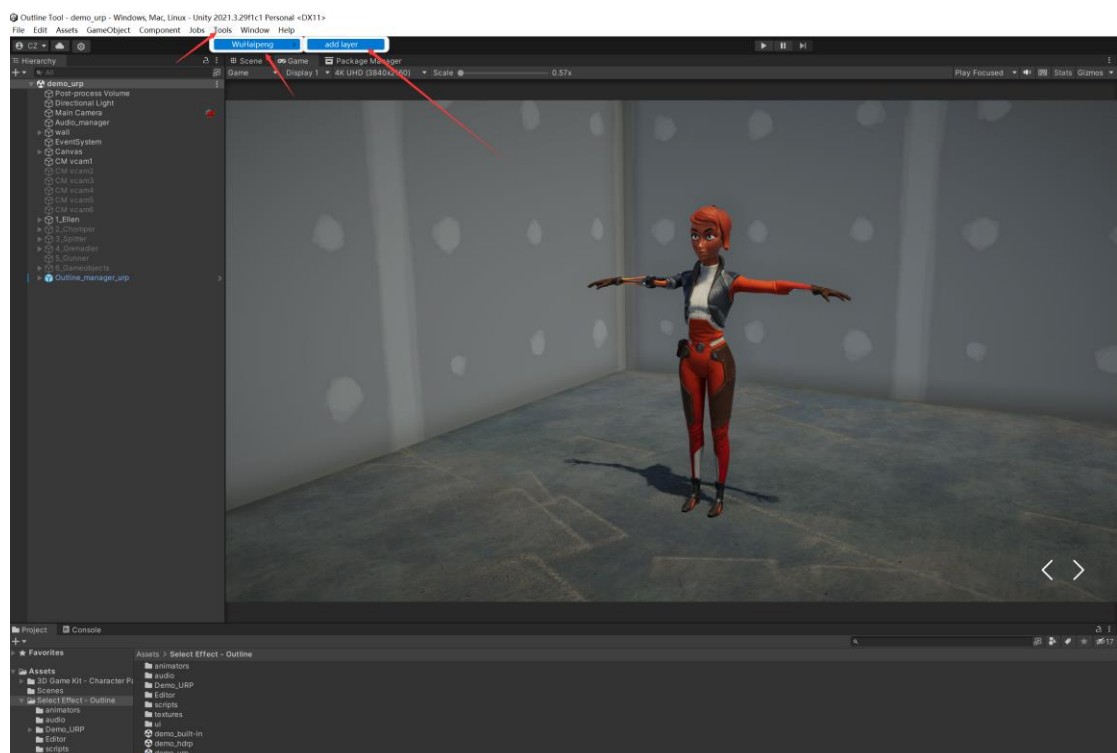

If you plan to use it in the Built-in rendering pipeline, you need to import "Shader Graph" in the Package Manager first.

If you have any questions, please feel free to contact me

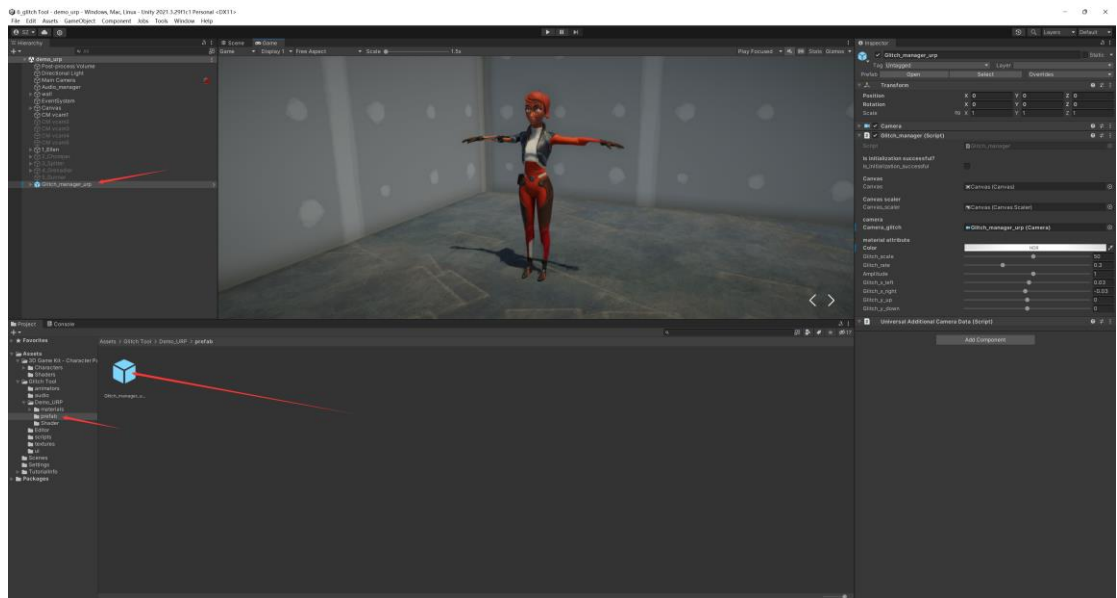

E-mail: [wud02879@gmail.com](mailto:wud02879@gmail.com)

## How to Use it:

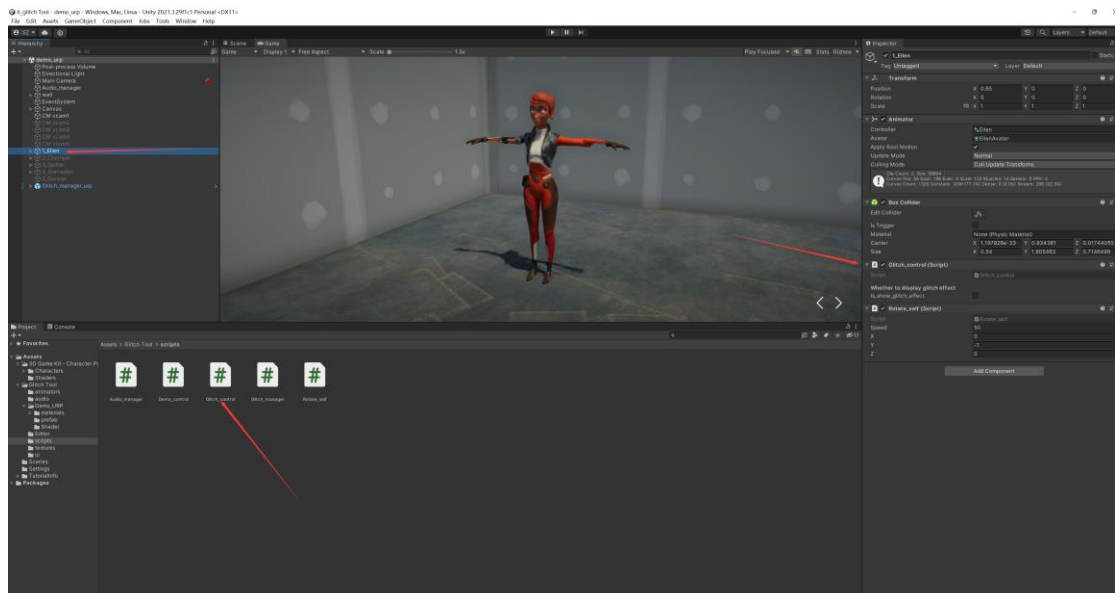

1. You need to click the "Tools/WuHaipeng/add layer" button in the menu bar. As shown below:

2. Drag the "Glitch\_manager" prefab into your scene. As shown below:

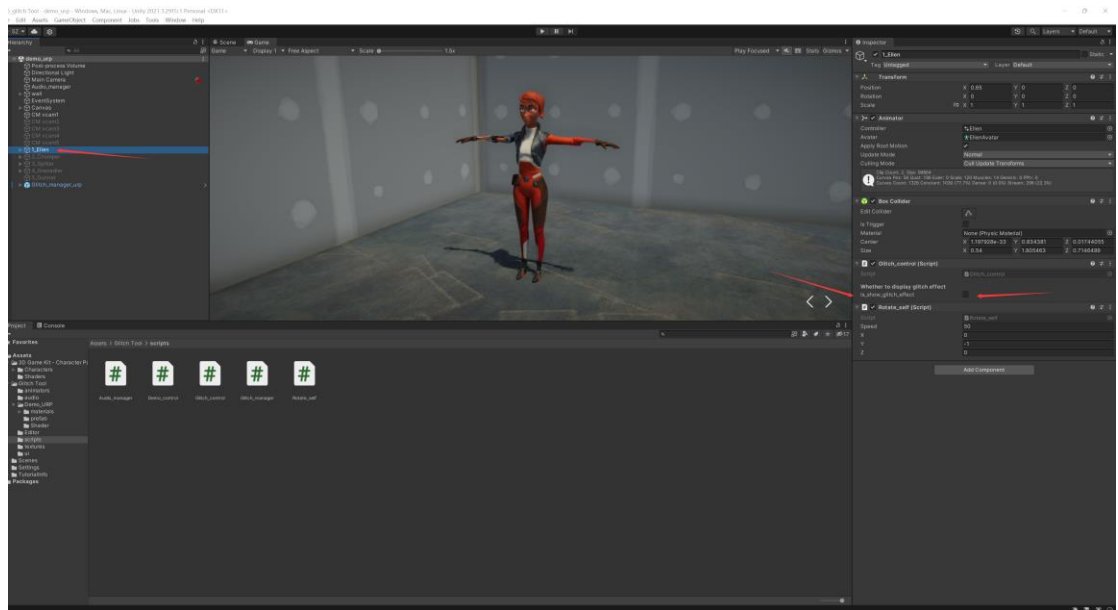

3. Add the "Glitch\_control" script to the game object you want to add glitch effect. As shown below:

4. Control the "is\_show\_glitch\_effect" variable of the "Glitch\_control" script in the above steps to display and

hide the glitch. As shown below:

5. Modify the parameters of the "Glitch\_manger" script to modify the Glitch effect. As shown below:
